

Eze Smart Mobility Solutions

Staying ahead of market movements requires an always on approach. Hand-held devices are the lifeline for busy investment professionals but access to voice and email is no longer enough. Today's professionals require access to critical market and portfolio data to maintain control of business and investment operations.

Eze Castle Integration's Eze Smart Mobility Solutions is a complete portfolio of EzeApproved wireless applications and hand-held devices for hedge fund and investment firms. Eze Smart Mobility helps take the guess work out of selecting the right mobile application and streamlines the device purchasing process.

EzeApproved Applications

New applications for handheld devices are emerging daily, yet not all offerings are created equal. Some do not address the unique needs of investment firms, while others are immature.

Eze Castle knows the business and technology requirements of investment firms and evaluates mobile applications based on a specific set of requirements including business relevance, reliability and security. From market data and CRM access to business continuity communication tools, Eze Castle is regularly expanding the Eze Smart Mobility portfolio with new EzeApproved applications.

Current EzeApproved applications include:

- ◆ **marketStream:** Ideal for firms requiring real-time access to market data, marketStream delivers exhaustive real-time Reuters financial information from 30 financial exchanges to mobile devices. Financial information, including portfolio positions and intraday charting, is delivered at high speeds and allows connectivity even while roaming on foreign networks.

mHedge Manager by Pyxis Mobile: Taking mobility for investment firms to the next level, mHedge Manager is a comprehensive real-time profit and loss, strategy, portfolio and market data monitoring tool for hedge funds. By extending real-time market data from order management and accounting systems, mHedge users have instant access to portfolio and strategy reports, order ticket monitoring, and market data. mHedge Manager enables real-time decision making and enables firms to generate higher returns and be more efficient while on the road.

Wireless Devices, Accessories & Plans

Eze Castle Integration has also teamed with eAccess to provide investment firms easy access to the mobile devices they require. Eze Castle clients can now purchase devices, accessories and service plans via a secure website or by phone. The online store is located at:
