

Backup and Recovery

Eze Vault

The ability to seamlessly backup, protect and recover critical data is essential for today's hedge fund and investment firms.

Traditional tape backup solutions are cost-effective to implement and maintain, and well suited for long-term data archival; however they do not appropriately address the protection and recovery objectives of most hedge fund and investment firms. Day-to-day tape backups can leave firms susceptible to data loss and slow recovery efforts should a virus, data corruption or other failure occur. Adding to the vulnerability, too often firms do not take backup tapes off-site nightly or establish backup and restore procedures to protect the integrity of the data.

Eze Vault, which is managed and administered by Eze Castle, provides continuous or daily online backup of critical business files and databases so the data is always protected and available for fast recovery. Eze Vault is a fully automated service that works by automatically transferring encrypted data over the Internet to a highly secure data center. Data can be recovered and restored quickly with just a few mouse clicks.

Eze Vault Highlights

Professionally Managed by Eze Castle

With the Eze Vault service, Eze Castle handles the complete process, from initial setup and implementation to ongoing

monitoring and maintenance, ensuring a client's data is always protected and available. Eze Castle is a firm's advocate and liaison, and Eze Castle engineers are available 24 x 7 x 365 to handle data recovery efforts. All client data is stored in a highly secure underground facility and monitored 24 x 7 x 365.

Fully Automated & Continuous Backup

Eze Vault automatically and continuously protects data to help ensure complete recovery after a loss. With Eze Vault, a firm's backups are fully automated and occur over the Internet. There is no manual intervention required, so firms can focus on managing their assets. Adding to the simplicity, data recovery is also fully automated. For recovery, a firm simply selects the data to be recovered from a catalog of archived file versions and Eze Vault automatically restores the data.

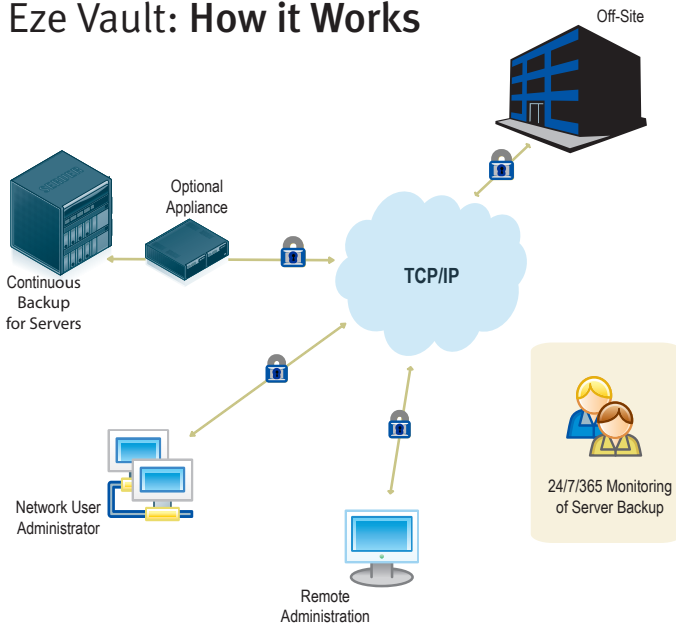

EZE VAULT BENEFITS

- Professionally managed and monitored 24 x 7 x 365
- Fully automated off-site data protection
- Rapid data recovery
- Highly secure

About Eze Castle Integration

Eze Castle Integration (www.eci.com) is the leading provider of technology, IT services and consulting to the investment industry. The company's service areas include Outsourced IT, Startup and Relocation, Managed Services, Professional Services, Telecommunications, Disaster Recovery and Business Continuity Planning, Archiving, Storage, Colocation and Internet Service. Eze Castle Integration is headquartered in Boston and has offices in Chicago, London, Los Angeles, Minneapolis, New York, San Francisco, Singapore, and Stamford. © 2010 Eze Castle Integration, Inc.

Eze Vault: How it Works

Complete Protection of Open Files and Databases

Eze Vault provides built-in support for open file and database backup without complex plug-ins, costly third-party tools or custom configurations. The service seamlessly backs up changing files and databases including Exchange and SQL so application data is continuously protected.

Simple Web-based Management

With the Eze Vault management console, firms gain complete centralized control of backup functions. The web portal interface provides easy point-and-click access to data for simplified backup management and recovery. Through the web portal firms can manage activities including creating backup policies, launching restore efforts and updating account information.

Rapid Recovery

Data corruption or inadvertent changes are common causes of data loss. To accelerate recovery, Eze Vault uses a unique delta restore technology that automatically recovers only the data that has changed since the last backup rather than restoring the entire file or database. Through continuous backup of server data, Eze Vault can provide nearly 100 recovery points daily.

If a virus corrupts a few files in a large database, for example, Eze Vault rolls back the database to its exact state prior to the corruption, reconstructing the database rapidly by restoring only changed data.

Highly Secure

To help ensure the highest levels of security throughout the entire backup process — from transmission to recovery — Eze Vault encrypts all data at the source with a unique key. For an additional layer of protection, the service uses the Secure Socket Layer (SSL) to establish a secure, resilient communication tunnel to the off-site storage facility.

MORE INFORMATION

Eze Castle Integration's Eze Vault service provides a complete backup and recovery solution for investment firms.
