

## Eze Virtual Office

Investment firms require a resilient infrastructure and specially-tailored business solutions. As a distinguished service provider to the financial services industry, Eze Castle Integration understands the solutions and applications firms need to execute day-to-day operations. Eze Virtual Office offers firms the capabilities of a fully managed infrastructure and key business applications without the need for building a data center or purchasing costly equipment.

With services designed specifically to support the needs of investment professionals, Eze Castle delivers simplicity, flexibility and convenience through our all-inclusive Virtual Office package.

Eze Virtual Office is developed specifically to enable quick turn-up, while minimizing large upfront capital expenditures normally associated with a dedicated infrastructure build-out. Additionally, Eze Virtual Office offers a highly resilient and available technology platform that minimizes risk and allows firms to focus on making investment decisions rather than solving IT issues.

Eze Virtual Office provides firms with three distinct advantages:

### **Flexibility**

Eze Virtual Office offers firms increased flexibility over a traditional communications room, allowing for easy fund startup and the ability to scale business without complications.

Eze Castle's per user/per month pricing structure offers firms the utmost in simplicity. In addition to easy access to Microsoft Exchange and BlackBerry Enterprise Server (BES), our Virtual Office package provides quick and easy integration with market data feeds, including real-time pricing.

### **Reliability**

With a hosted delivery method and all-inclusive subscription, Eze Virtual Office provides firms with the premier technology foundation and business applications necessary to operate seamlessly. The solution is built on a highly resilient infrastructure that is monitored 24x7x365 at the Eze Castle Network Operations Center (NOC).

Eze Virtual Office also provides assurance that a firm's data is protected through nightly replication of data to a geographically diverse location.

### **Security**

The Eze Virtual Office infrastructure is architected using the latest Cisco and virtualization solutions to be highly resilient. Anti-virus and anti-spam technology are in place to provide ultimate security, as is a highly developed firewall. Additionally, Eze Virtual Office features an advanced monitoring system with automatic notification of problems, leading to fast resolutions.
